

## MEASUREMENT GUIDELINES & WORKSHEET

### HEIGHT

- 1) Starting on the left side of the opening, measure the top to bottom inside Height.  
Enter measurement on line "A"
- 2) Do the identical measurement at the middle of the opening.  
Enter measurement on line "B"
- 3) Then measure at the right of the opening.  
Enter measurement on line "C"

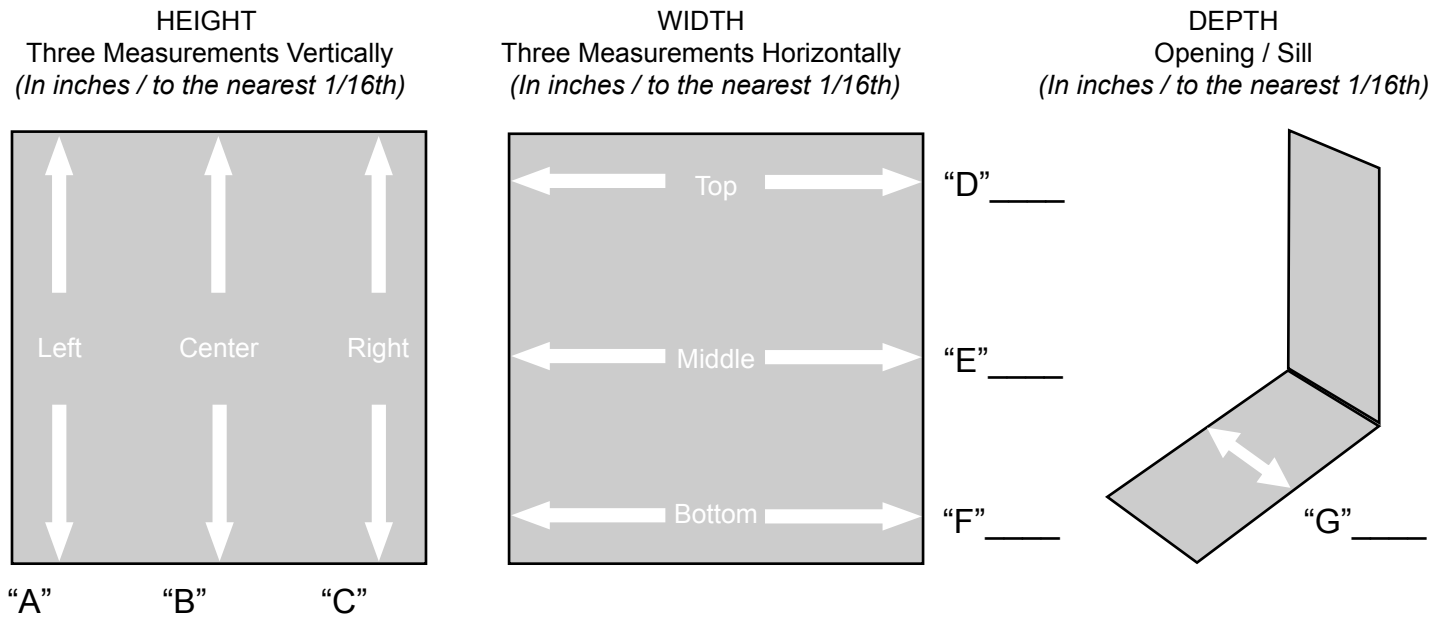

### WIDTH

- 4) At the left side of the opening, measure from left to right, the inside width at the top of the opening.  
Enter measurement on line "D"
- 5) Measure again at the middle of the opening.  
Enter measurement on line "E"
- 6) Measure once again at the bottom of the opening.  
Enter measurement on line "F"

### DEPTH

- 7) Measure the Depth of the opening at several different locations (top, bottom, side, etc).  
Enter the smallest measurement on line "G"

*It is important to have three measurements for both height and width to exactly know how square, plumb, sagging or crowning any particular surface might be, thus aiding in the accuracy of the System.*

Accuracy of measurements is the most important factor in fabricating your *GLYDERS* system.

We can only manufacture to the specifications that are received.

Remember the old saying, "Measure Twice, Cut Once"
